

UEL: Providing Clean Water

China is a country of more than a billion people, and these citizens, along with their communities, businesses, and manufacturers, require an abundance of clean water to thrive. However, challenges related to water pollution and growing resource demand have led the government to emphasize reducing contamination and promoting recycling. UEL's growing water treatment capacity and its cutting-edge membrane technology represent key components in China's campaign to address water pollution challenges. The company helps alleviate budgetary pressures on local governments by cutting the amount of municipal land needed for water treatment plants and by operating plants at the highest cost-efficiency, while also reducing hazardous seepage often associated with older conventional treatment facilities. Together, UEL and KKR aim to be at the forefront of this sector, providing innovative solutions, technological expertise, and positive market standards.
